The National Assembly for Wales is the democratically elected body that represents the interests of Wales and its people, makes laws for Wales and holds the Welsh Government to account.
Research Briefing
Labour Market Briefing

This briefing paper provides a statistical overview of the labour market.

Information is included on Assembly constituencies, Wales and UK nations and regions.
Labour Market Briefing

Labour market statistics are published each month by the Office for National Statistics (ONS). This paper is released shortly after the ONS data and aims to provide a brief summary of the latest situation across the labour market in Wales and the UK.

This paper includes comparative information on unemployment, employment and economic inactivity rates in Wales and the other UK nations. Additionally, the latest headline labour market figures for Welsh constituencies are provided.

The Research Service is able to provide Assembly Members and their staff with more detailed analyses in relation to unemployment and long-term labour market trends on request. If you would like us to do this, please contact Gareth Thomas on 0300 200 6307 or at GarethDavid.Thomas@assembly.wales

Definitions of key terms relating to being in and out of work

When the Office for National Statistics (ONS) publishes statistics on the labour market, people are classed as being in one of three groups. These are being in employment, being unemployed or being economically inactive.

- **People in employment** are those aged 16 and over who did paid work (as an employee or self-employed), those who had a job that they were temporarily away from, those on government-supported training and employment programmes, and those doing unpaid family work;

- **People who are classed as ILO unemployed** are those aged 16 and over who are without a job, have been actively seeking work in the past four weeks and are available to start work in the next two weeks, or are out of work and are waiting to start a new job in the next two weeks; and

- **People who are classed as being economically inactive** are those aged 16 and over without a job who have not sought work in the last four weeks and/or are not available to start work in the next two weeks. The main economically inactive groups are students, people looking after families and the home, temporary and long-term sick and disabled people, and retired people.

There are two main measures of unemployment used by the ONS. In addition to the ILO measure outlined above, the **claimant count measures people who are claiming Jobseeker’s Allowance (JSA) and Universal Credit**. It is lower than the ILO definition, because some unemployed people are either not entitled to claim benefits, or choose not to do so. **It is the most up-to-date unemployment measure.**

To take into account the differences between the number of people in different age groups and geographical areas, the **figures in this paper are mainly expressed as rates** rather than the number of people.

**Seasonally adjusted and non-seasonally adjusted data**

**Headline ILO unemployment and claimant count data for Wales and the other UK nations and regions is seasonally adjusted by the ONS.** This means that it is statistically adjusted to remove seasonal factors such as holidays and labour market recruitment patterns. For example, a large number of people leave full-time education and enter the labour market in the summer. To make it easier to identify labour market trends the ONS seasonally adjusts this data. **Other unemployment data such as that for age groups and Parliamentary Constituencies is not seasonally adjusted by the ONS.**
1. Unemployment in Wales

This section provides headline information on ILO unemployment rates and the claimant count across the UK. It also looks at unemployment by age. Key points from this section of the briefing include:

– The latest figures show that the ILO unemployment rate in Wales is **4.8% in February - April 2016**, the lowest rate of the UK nations and the lowest since 2008. (figure 1.1);

– The claimant count rate has seen a decrease across Wales and the other UK nations over the past three years. Wales’ claimant count rate has been below only Northern Ireland for this period, and is 2.9% in May 2016. (figure 1.2);

– Youth unemployment rates across Wales are higher than for other age groups, and have remained constant at 17.4% in January – December 2014 and 2015. (figure 1.3);

– Looking across the constituencies, **Rhondda** has the highest ILO unemployment rate at 9.6%, with **Alyn and Deeside** having the lowest at 2.5% in January – December 2015.

– For the ‘unofficial’ claimant count statistics calculated by the Research Service, **Blaenau Gwent** had the highest rate at 5.3% in May 2016, with **Brecon and Radnorshire** having the lowest at 1.1%.

2. Employment and jobs

This part of the paper looks at employment rates across the UK for people of working age (16-64). It also considers changes in employment in the public and private sectors in Wales. The main conclusions that can be drawn from this section include:

- The **working age employment rate** in Wales has increased over the past five years, with the current rate being 71.9% in February – April 2016. (figure 2.1);

- **Over the past five years the working age employment rate in Wales has been above Northern Ireland, but below the other UK nations.**

- Over the past five years to quarter 1 of 2016, **employment in the private sector** in Wales has increased by 10.5%, while **employment in the public sector** has decreased by 9.1% (figure 2.2); and

- Looking at the constituency data, 77.6% of people aged 16-64 in **Montgomeryshire** are in work in January – December 2015, the highest rate of the Welsh constituencies. In **Cardiff Central**, 60.3% of 16-64 year olds are working, the lowest rate of any of the Welsh constituencies.

Figure 2.2: Percentage change in employment in public and private sectors over past five years (not seasonally adjusted)

Source: Office for National Statistics, Public Sector Employment, Quarter 1 2016
3. Economic Inactivity

This part of the paper looks at people outside the labour market, those who are classed as being economically inactive. This includes people aged 16-64 without a job who have not sought work in the last four weeks and/or are not available to start work in the next two weeks. The graphs below consider the economic inactivity rate for people of working age across the UK, and look at the reasons why people in Wales are economically inactive. The key points from this section of the briefing are:

- **Wales has had a higher working age economic inactivity rate than the UK average throughout the past five years.** This has fluctuated over the past five years, and is 24.3% in February - April 2016 (figure 3.1);

- The main reasons given by economically inactive people in Wales in January – December 2015 were temporary and long-term sickness (30.9%), being a student (25.2%) and looking after the family/home (20.7%) (figure 3.2); and

- At constituency level, **Cardiff North** had the lowest working age economic inactivity rate in January – December 2015, at 17.4%, with **Cardiff Central** having the highest at 35.3%. This is partially due to the high number of university students living in Cardiff Central.

Figure 3.1: Working age economic inactivity in Wales and other UK nations (seasonally adjusted)

Figure 3.2: Reasons for working age economic inactivity in Wales, January – December 2015 (in %)

- Temporary/long-term sick: 30.9%
- Student: 25.2%
- Looking after family/home: 20.7%
- Retired: 15.0%
- Other: 7.9%

# What’s happening in your constituency?

Table 4.1 sets out the latest headline labour market statistics for Welsh constituencies. The constituencies with the best performance for each variable are highlighted in gold, and the worst performing constituencies highlighted in grey.

Additional information on the labour market in your constituency including comparisons over time is available on the Research Service [constituency support pages](#).
